                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Dunn,D., Aoyagi,A., Barber,M., Beacorn,T., Duval,B., Hamil,C., Islam,H., Longacre,S., Mahmoud,M., Meenen,E., Pedersen,T., Reilly, Rose,M., Rose,R., Stokes,R., Tingey,A., von Niederhausern,A.
                                                                                                                                                                                                                                                               TTCGTGGGATAGTCCGTCATGGTGT- 27
                                                                                                                                                                                                                                                                                                                                                                                                                                             adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gl14732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Biomedical Polymers Research Bldg.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /lab_host="E. However, it should not be assumed that this clone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows

                                                                                                                                                                                                                                                                                                                                    Human DNA sequence from clone RPI-32I10 on chromosome 22 Contains a pseudogene similar to TCEBIL (transcription elongation factor B (SIII), polypeptide 1-like), a CA repeat (D22S1159), STSs and GSSs., complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2 GGACTCAGTCCTTGGTCATCTCACCTTCT 30
                                                                                                     On Aug 24, 1997 this sequence version replaced gi:1841910. During sequence assembly data is compared from overlapping clones Where differences are found these are annotated as variations
                                                                                                                                                Submitted (08-DEC-1999) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known
                                             corresponding to the overlapping clone, as we only a small overlap as described above.
                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality > 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence restriction digest. irom more than one subclone; and the assembly was confirmed ьy

### MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis McPherson and information about the map position of this sequence, see http://genome.wustl.edu/gsc

#### SOURCE INFORMATION:

This clone was derived from human PAC library RPCI-5, prepared Pieter de Jong and coworkers at http://www.chori.org using the method described by Joannou et al., Nature Genetics 6:84-9 (1977) The library is from one male donor. The clone may be obtained either from Genome Systems, http://www.genomesystems.com) or Research http://www.resgen.com); or from Pieter de Genetics, Inc. (1994).

# NEIGHBORING SEQUENCE INFORMATION:

PCYPAC2

The clone sequenced to the right is CTD-2532L16, 200 bp overlap. Actual start of this clone is at base position 1 of RP5-991G20; actual end is at base position 141313 of RP5-991G20.
